Why Radix

A place where DeFi can thrive

Build fast & don't break things

A purpose built DeFi programming environment that will enable fast AND secure development.

Reward everyone that makes it better

A system of on-ledger royalties that will reward those that contribute dApp code to the ecosystem.

Scale without friction

A consensus algorithm that will provide unlimited scalability without breaking DeFi composability.

Radix is the **only** decentralized network where developers will be able to build quickly without the constant threat of exploits and hacks, where every improvement will get rewarded, and where scale will never be a bottleneck.

Just watching the @radixdlt AI feels like the launch of the iPhone has changed, yet in this case no

Something BIG is coming this year @radixdlt. 28th April - Betanet Q2 - Mainnet Launch (Olympia) Radix Engine v2 (Alexandria). The

Sooooo who's ready for @radixdlt one of the biggest projects of the year. Tick Tock.

In pr th 50

just yet. In a world of 9800 bau
just got broadband. Congrats to the DEV team and to @fuserlee
performed a HARD work!

@Willy Woo

@JM Borg

✓ Radix Investors

Smart Money behind the Smart Money Platform

“I see the same revolutionary potential in the Radix team as I did with the Skype and Netscape teams at the birth of the internet. We’re excited to join them at the start of a new decentralized network revolution.”

Saul Klein, LocalGlobe VC

people behind Radix, they’re very smart, so yes I think people that are smart

omics

“Wise is a multi-billion dollar something that shouldn’t be broken. the banking system is not integrated. Radix has the potential to raise money and finance

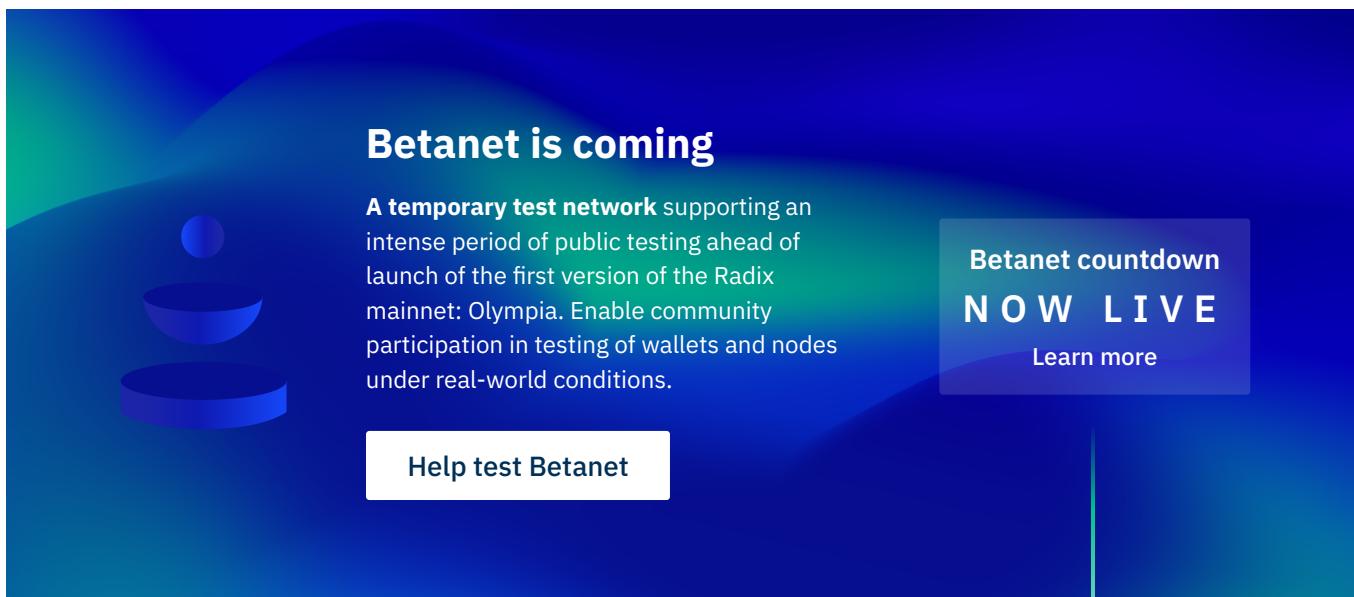

Taavet Hinrikus, Wise

✓ Radix Roadmap

Excellence, Step by Step

The path to unlimited scalability, developer royalties, and a great builder experience.

Betanet is coming

A temporary test network supporting an intense period of public testing ahead of launch of the first version of the Radix mainnet: Olympia. Enable community participation in testing of wallets and nodes under real-world conditions.

[Help test Betanet](#)

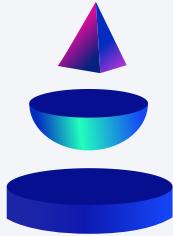

Betanet countdown
NOW LIVE
[Learn more](#)

Olympia

Decentralized network foundations with simplified unsharded Cerberus consensus, low fees, 50tps, 5sec finality time, and dPOS. Hold, transact, and stake tokens for network security and rewards using basic Olympia Radix wallet.

Coming in Q2 2021

Alexandria

A new DeFi development experience with the Scrypto language and Radix Engine v2, running in a private environment for early builds and testing. Give developers a head start on experimentation with building DeFi concepts and reusable features for Radix.

Coming in Q4 2021

Babylon

An open, self-incentivizing DeFi ecosystem with Scrypto dApp network deployment, decentralized Royalty System, and open Blueprint Catalogue. Open up fully featured, secure DeFi dApp ecosystem capability on Radix.

Coming in 2022

Xi'an

Unlimited scalability and composability to carry DeFi into the global mainstream future with sharded, linearly scalable Cerberus consensus.

Cutting edge research

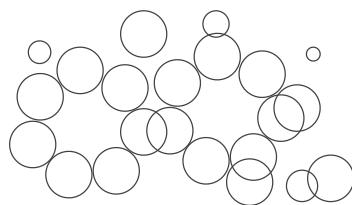

Radix Labs is where we research & test future Radix technology.
Like Formula 1 for our DLT tech.

24TB of data a week on a DLT

Cassandra is our state-sharding prototype where you can watch us replay Twitter history live. It is the largest big data demonstration in crypto to date.

Coming soon

Ongoing Academic Research

Radix continues to work closely with ExpoLabs, one of the foremost distributed systems research teams in the world. Led by Professor Mohammad Sadoghi of the University of California, Davis, optimizations of Cerberus continue to be investigated and validated.

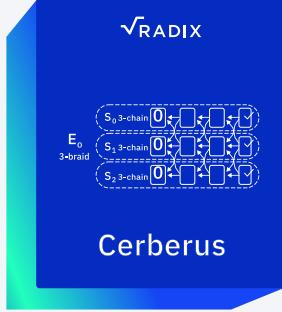

Read more

1.4m TPS on a DLT

Radix' last consensus algorithm 'Tempo' publicly achieved 1.4m TPS in 2018, the current world record. The new algorithm 'Cerberus' is theoretically infinitely scalable and builds on many of the insights we learnt from replaying the entire history of Bitcoin in less than 30 minutes!

✓XRD Tokenomics

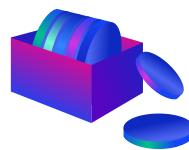

A Token to Power the Radix Ecosystem

XRD is the native token of the Radix Mainnet and may be used for securing the network, accessing DeFi, deploying smart contracts and paying for transactions.

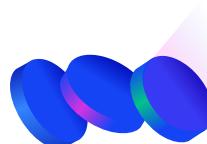

Token Burn

100% of all transaction fees will be burned.

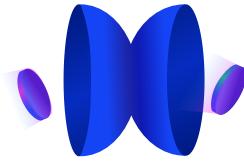

Lockup via PoS

53.8% of token supply is locked on average across POS networks.

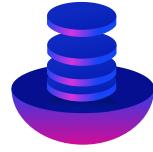

Staking Rewards

300 million XRD per year will go to stakers for securing the network.

Easy Ramps

Our eXRD/XRD bridge will allow users to move quickly between Ethereum and Radix.

Lockup via DeFi

XRD is likely to be one of the key sources of user collateral for DeFi on Radix.

Fixed Token Supply

XRD has a maximum of supply of 24Bn tokens that will not be reached for at least 40 years.

Radix Economic paper

✓ The Radix ERC20 Token

A Token to Kickstart a DeFi Economy

eXRD was launched to ensure the mainnet is sufficiently decentralized, to build effective bridges between Ethereum and Radix, and to integrate key pieces of infrastructure, including:

\$0.17

eXRD Price

\$190.22M

Market Cap

\$2.31M
